VISION MEETS SAFETY

Smart Security & Automation for
Government Institutes | Corporates | Education

IP Camera System

An IP Camera System is a modern surveillance solution that uses internet connectivity to deliver high-quality video, real-time remote monitoring, and features like night vision, motion detection, and smart alerts.

IP Video Door Phone

A Video Door Phone is a smart security device that lets you see, hear, and talk to visitors before allowing entry. It features a high-resolution camera, two-way audio, and night vision for clear and secure communication.

Digital Door Lock

A Digital Door Lock is a keyless electronic lock that allows access using a PIN, fingerprint, RFID card, or mobile app. It offers enhanced security, multiple user access, and convenient control, making it ideal for homes, offices, and commercial spaces.

Home Automation

Home Automation is the use of smart technology to control devices like lights, AC, appliances, and security systems remotely or automatically via mobile apps or voice commands.

Building Management Sys

A Building Management System (BMS) is a centralized system that monitors and controls services like HVAC, lighting, power, security, and fire safety.

Gate Automation

Gate Automation Systems use electric or mechanical motors to open and close gates automatically, eliminating manual effort.

Automatic Boom Barrier

An Automatic Boom Barrier is an access control system used to manage vehicle entry and exit at parking areas, tolls, and premises.

Fire Alarm System

A Fire Alarm System is a safety system that detects smoke, heat, or fire and alerts occupants through sound and visual signals.

Access Control

An Access Control System is a security solution that manages and monitors entry and exit of people in a restricted area.

Flap & Turnstile System

A Flap & Turnstile System is an access control solution that regulates pedestrian entry and exit in high-traffic areas.

Public Address & Music System

A Public Address & Music System is an audio system used to broadcast announcements, alerts, and background music in various spaces.

It includes microphones, amplifiers, and speakers to ensure clear communication and is widely used in schools, offices, malls, hospitals, and public areas.

EPBX With IP Telephone

EPBX with IP Telephone & Attendance is an integrated system that combines office communication and employee attendance tracking.

It enables internal/external calling via IP phones and records check-ins and check-outs, improving efficiency, communication, and record management.

Attendance

An Attendance System is a digital solution used to record and manage attendance in schools, colleges, or workplaces.

It uses biometrics, RFID, QR codes, or apps for accurate tracking, offering real-time monitoring, secure data storage, and easy reporting.

WiFi With Networking

WiFi with Networking is a complete connectivity solution for homes and businesses, offering both wireless and wired internet access. It uses routers, access points, and network systems to provide fast, stable, and secure communication for multiple devices.

AV Solutions

AV (Audio-Visual) Solutions provide high-quality sound and visual systems for presentations, meetings, and entertainment.

They include displays, projectors, speakers, and conferencing tools to enhance communication and engagement in offices, classrooms, and event spaces.

Motion Sensor & Lightings

Motion sensor-based lighting automatically turns lights ON when movement is detected and OFF when no activity is present.

It saves energy, improves convenience, and enhances safety, making it ideal for corridors, parking areas, offices, and common spaces.

Electricals & Home Interior

Electricals & Home Interior solutions cover wiring, lighting, power systems, and interior design elements to create safe, functional, and aesthetically pleasing spaces.

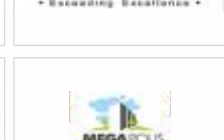

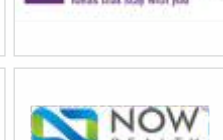

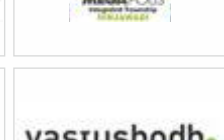

They enhance comfort, efficiency, and overall living or working experience.

Road Safety Works

Road Safety Works are measures designed to ensure safe movement of vehicles and pedestrians on roads.

They include signs, markings, speed breakers, barriers, and lighting to prevent accidents, improve visibility, and ensure smooth traffic flow.

Founder

Third Eye Info Solutions Group is a unified provider of Electrical Low Voltage Solutions, delivering comprehensive, integrated services under a single platform. We are one of the fastest-growing companies in the sector, supported by a dedicated team of experienced service and support engineers. Our portfolio combines trusted brands in fire, networking, security, and automation, offering the most comprehensive, premium solutions across industries.

Throughout his career, Irshad Sayyad has worked with leading companies such as DHL, Honeywell, Triple Point Technology, and Sungard Global, gaining experience in Sales & Marketing, Business Domain Consultancy, Functional Consultancy, and Project Management. In his entrepreneurial journey, he has founded Third Eye Info Solutions, a leader in Electrical Low Voltage Solutions in Pune.

Our Vision

To become the most customer-centric ELV solution provider through optimization and value engineering.

Inception

In today's fast-paced digital world, cybersecurity is no longer optional—it's a necessity. "Securing Your Future with Cyber" is more than just a slogan; it's a commitment to building a resilient infrastructure that protects your business and personal data from evolving cyber threats. As cyber-attacks become more sophisticated, ensuring robust security measures is critical for your continued success. By adopting advanced cybersecurity strategies, we not only protect your sensitive data.

Our Values

SECURE – Sensibility, Efficiency, Control, Utility, Reliability, and Eclecticism.

Milestones

Founded in 2013, Third Eye Info Solutions has built a strong track record with the successful execution of over 150 residential and commercial projects. Today, we are recognized as a leading provider of Fire, Networking, Security, and Automation Solutions, delivering reliable, future-ready systems across diverse sectors.
